Academic Year: 2025-26

Year: Second Year

Semester: II

PRN No.: 1012411011

Name: Riddhee Kulkarni

Subject: Python Programming

Assignment No.: 14

Date: 02/02/2026

Lab Assignment: 14

Aim:

Write a program using function to check whether two numbers are equal or not.

Objective:

To understand the use of functions and conditional statements in Python.

Theory:

A function is a block of reusable code that performs a specific task.

In this program, a function compares two numbers using the equality operator (==).

If both numbers are equal, an appropriate message is displayed.

Algorithm:

- Start
- Define a function to compare two numbers
- Read two numbers from the user
- Compare the numbers using ==
- Display the result
- Stop

Pseudo Code:

FUNCTION check_equal(a, b)

IF a == b

PRINT "Numbers are equal"

ELSE

PRINT "Numbers are not equal"

END IF

END FUNCTION

DES Pune University, Pune

Code:

```
def check_equal(a, b):  
    if a == b:  
        print("The two numbers are equal");  
    else:  
        print("The two numbers are not equal");  
num1 = int(input("Enter first number: "));  
num2 = int(input("Enter second number: "));  
check_equal(num1, num2);
```

Output:

```
Enter first number: 21  
Enter second number: 21  
The two numbers are equal  
  
Enter first number: 21  
Enter second number: 22  
The two numbers are not equal
```

Conclusion:

The program successfully checks whether two numbers are equal using a function.
