Academic Year: 2025-26

Year: Second Year

Semester: II

PRN No.: 1012411011

Name: Riddhee Kulkarni

Subject: Python Programming

Assignment No.: 8

Date: 05/01/2026

Lab Assignment: 08

Aim:

To write a Python program to check whether the user input is a number or a character.

Objective:

To identify whether the input entered by the user is a number or a single character.

Theory:

In Python, input is taken as a string.

- `isdigit()` checks if the input contains only digits
- `isalpha()` checks if the input contains only alphabets
- `len()` ensures the input is a single character

Algorithm:

1. Start
2. Read input from user
3. If input is digit, print number
4. Else if input is a single alphabet, print character
5. Else print invalid input
6. Stop

Pseudo Code:

```
START
READ value
IF value is digit
    PRINT "Number"
ELSE IF value is alphabet AND length = 1
    PRINT "Character"
ELSE
    PRINT "Invalid input"
END IF
STOP
```

DES Pune University, Pune

Code:

```
value = input("Enter something: ");
if value.isdigit():
    print("It is a number");
elif value.isalpha() and len(value)==1:
    print("It is a character");
else:
    print("It is neither a number nor a character");
```

Output:

```
Enter something: 12
It is a number

Enter something: r
It is a character

Enter something: abc
It is neither a number nor a character
```

Conclusion:

The program correctly identifies whether the input is a number or a character using string functions.
