Academic Year: 2025-26

Year: Second Year

Semester: II

PRN No.: 1012411011

Name: Riddhee Kulkarni

Subject: Python Programming

Assignment No.: 9

Date: 05/01/2026

Lab Assignment: 09

Aim:

To write a Python program to find the greatest of three numbers entered by the user.

Objective:

To compare three numbers using conditional statements and display the greatest number.

Theory:

Conditional statements (`if`, `elif`, `else`) are used in Python to execute different blocks of code based on conditions.

By comparing three numbers using relational and logical operators, we can determine the greatest among them.

Algorithm:

1. Start
2. Read three numbers from the user
3. If first number is greater than the other two, print first number
4. Else if second number is greater than the other two, print second number
5. Else print third number
6. Stop

Pseudo Code:

START

READ num1, num2, num3

IF num1 > num2 AND num1 > num3

 PRINT "1st number is greatest"

ELSE IF num2 > num1 AND num2 > num3

 PRINT "2nd number is greatest"

ELSE

 PRINT "3rd number is greatest"

END IF

STOP

DES Pune University, Pune

Code:

```
num1=int(input("Enter 1st number: "));
num2=int(input("Enter 2nd number: "));
num3=int(input("Enter 3rd number: "));
if(num1>num2 and num1>num3):
    print("1st number is greatest.");
elif(num2>num1 and num2>num3):
    print("2nd number is greatest.");
else:
    print("3rd number is greatest.");
```

Output:

```
Enter 1st number: 100
Enter 2nd number: 45
Enter 3rd number: 98
1st number is greatest.
```

```
Enter 1st number: 23
Enter 2nd number: 45
Enter 3rd number: 12
2nd number is greatest.
```

```
Enter 1st number: 21
Enter 2nd number: 79
Enter 3rd number: 86
3rd number is greatest.
```

Conclusion:

The program successfully compares three numbers and displays the greatest among them using conditional statements.
